A J2534 cable that supports the needed channel(s) (ISO9141/CAN/ISO15765/J1850) should work with any J2534-compliant software, OEM or third party. That said, there can be issues with OEM software not behaving in J2534 compliant ways due to bugs or design errors. For this reason, we are maintaining a list here of software which is known to work with our cable. If you find other software which works (or has problems) please let us know at support@tactrix.com .
The NASTF also maintains a
 Service Information Matrix
which can help you find software for a particular make.

Company	J2534 Program	Status	Notes
Audi	erWin	Not Tested	
BMW		Minimal Testing	
Chrysler		Not Tested	
Ford	http://www.motorcraftservice.com	Not Yet J1850 support pending
